Taller #2 \* TRANSFORMADA DE LA PLACE. -7 Demostrar si los siguientes sistemas de la forma y= H(X) son lineales e inVariables en el tiempo (SLIT) [A.]  $Y[n] = \chi[n] + 2\chi[n-1] - \gamma[n-1]$ Sea X1[n] > VIIn], X2[n] - Y2[n], definidas D OX  $y_1[n] = \frac{\chi_1[n]}{\chi_1[n]} + 2\chi_1[n-1] - y_1[n-1]$  $\frac{1}{2}\left[\frac{1}{2}\right] = \frac{\chi_2 \zeta_{n_2}}{2} + 2\chi_2 \left[\frac{1}{2}\right] - \frac{1}{2}\left[\frac{1}{2}\right]$  $\sqrt{[n]} = \frac{dx_1[n] + b x_2[n]}{+ 2(a x_1[n-1] + b x_2[n-1]} \dots$ -Y[n-1] Comparación directa. \[n-1] = a\\1[n-1] + b\\2[n-1] : V[n]= a V1[n]+ by2[n] cumple linealidad

[C] 
$$\sqrt{[n]} = \tilde{\chi} \left(\chi [n-1], \chi_n, \chi [n+1]\right)$$

= LINE ALIDAD

 $\chi_1 = [1,1,1], \tilde{\chi} = 1 \quad \chi_1 = [3,3,3]; \tilde{\chi} = 3$ 
 $05 * 1 + 0.5 * 3 = 2 \quad \text{EN GENERAL FALLA}$ 
 $\chi_3 = [0,5,100], \tilde{\chi} = 5$ 
 $\chi_4 = [0,6,400], \tilde{\chi} = 6$ 
 $\chi = \chi_3 + \chi_4 = [0,11,200), \tilde{\chi} = 11$ 

NO SIENPRE OCURRE = NO ES LINEAL

+ Invarianza => 51 se desplata, tambien ce desplata la ventana el sistema es variable en tiempo [FL SISTEMA NO ES SLIT]

[D]  $\chi(t) = \Lambda \chi(t) + B$ 
 $\chi(t) = \chi(t) + B$ 
 $\chi$
